### Cityspace to provide Merseyrail with passenger services at unstaffed stations

Cityspace has been awarded a contract by Merseyrail to install complete customer information and services networks at the five unstaffed stations in the Wirral along this vital urban network serving Liverpool and Merseyside.

Merseyrail manages 66 stations along the 75 mile route network accounting for around 30 million passenger journeys a year.

The planned services for the five lightly used, unstaffed stations will comprise seven Cityspace Smart Points providing ticketing and Permit to Travel. Interactive touch screens will offer access to real-time passenger information, online journey planning, timetables, local area maps with print-outs and customised digital travel content. Each unit features a broadcast screen for live bus and rail departure summaries, planned engineering notices and publicity. An emergency help point has also been fitted to each unit.
