CITYSPACE UNVEILS SMART POINT

Cityspace has launched Smart Point, its new modular range of interactive touch-screen terminals, delivering the widest choice of passenger information services at the point of departure or at interchanges.

The Smart Point presents the definitive, low-cost solution to delivering customised services, ticketing and security to rail and bus passengers where they're needed most, and it has already attracted interest from a number of local authorities and train operating companies.

Service and design options include:

- Interactive touch-screen services, including online journey planning, timetables, local area maps, print outs and local digital travel content;
- Broadcast services via the latest TV-style screens, displaying real-time bus and rail departures, disruptions, local news, events and public announcements;
- Self-service smart ticketing and cashless Permits to Travel;
- A help point option providing voice-over-internet protocol (VoIP) for routing to a travel call centre or emergency services;
- CCTV can easily be added for security or surveillance;
- Illuminated branding panel, giving 24/7 visibility and promotion of operator and service information; and
- Map and timetable panel for carrying changeable printed signage, route or local area maps.

Various levels of support are available too, from installation and basic monitoring to cleaning, inspections, parts and technical maintenance.
