### Cityspace wins for Cambridgeshire and Swansea BRT schemes

Cityspace, a provider of transport information and services to passengers, has been selected by Cambridgeshire Guided Busway in the UK in a competitive bid to provide a multi-functional off-bus ticketing network.

Cityspace has developed 17 smart card enabled, cash and cashless ticketing machines for the ticketing network at stops along the 25 kilometre route. The machines will set the benchmark as the first off-bus self-service ticketing terminals offering ITSO certified, Oyster-like facilities in the UK.

Meanwhile in Swansea, Wales, Cityspace is to deliver content management and a network of smart screens and smart panels for the city's Bus Rapid Transit (BRT) scheme due to open this summer.

The Swansea Metro is a pioneering BRT scheme aimed at delivering the public transport mode of choice between the bustling city centre, Swansea railway station and broader city limits to tackle growing congestion head-on by delivering a desirable alternative to the car for local journeys.
